

FEATURES

MitySOM-5CSX Embedded Vision Development Kit for Basler dart

MitySOM-5CSX Module

Additional Hardware Included:

- Micro B USB Cable
- Ethernet Cable
- AC to DC 12V 3A Adapter
- Option A
 - 1 Basler dart Mono Camera
- Option B
 - 2 Basler dart Color Camera

Digital Interfaces:

- 10/100/1000 MBit Ethernet Interface
- Debug UART to USB
- USB OTG Interface
- HDMI Interface
- Dual Basler BCON dart Camera Interfaces
- SD/MMC Card Socket
- M.2 Quad PCIe Connector
 - Supports NVME SSDs
- GPIO connector

Software and Documentation:

- Linux Kernel
- uBoot
- Development Environment - Virtual Machine
- Development Board Schematics
- Development Board Gerber Files
- Development Board BOM

APPLICATIONS

- Basler BCON dart Camera Evaluation
- Intelligent Imaging
- Factory Automation
- Industrial Automation
- Embedded Instrumentation
- Test and Measurement

DESCRIPTION

The MitySOM-5CSX Embedded Vision Development Kit (VDK) for Basler dart provides all the hardware and software support for system designers and developers to implement an embedded vision system utilizing the dart series cameras from Basler. The kit comes complete with the MitySOM-5CSX module, camera(s), and necessary cabling to start working on your project.

The MitySOM-5CSX Embedded VDK for Basler dart includes on-board Debug UART to USB converter, 10/100/1000 Ethernet, Universal Serial Bus (USB 2.0) USB-On-The-Go (OTG) communication interfaces.

The device, including attached Basler BCON dart cameras, is powered from a single +5VDC input (adapter included).

A block diagram of the MitySOM-5CSX Embedded VDK Baseboard is illustrated in Figure 1.

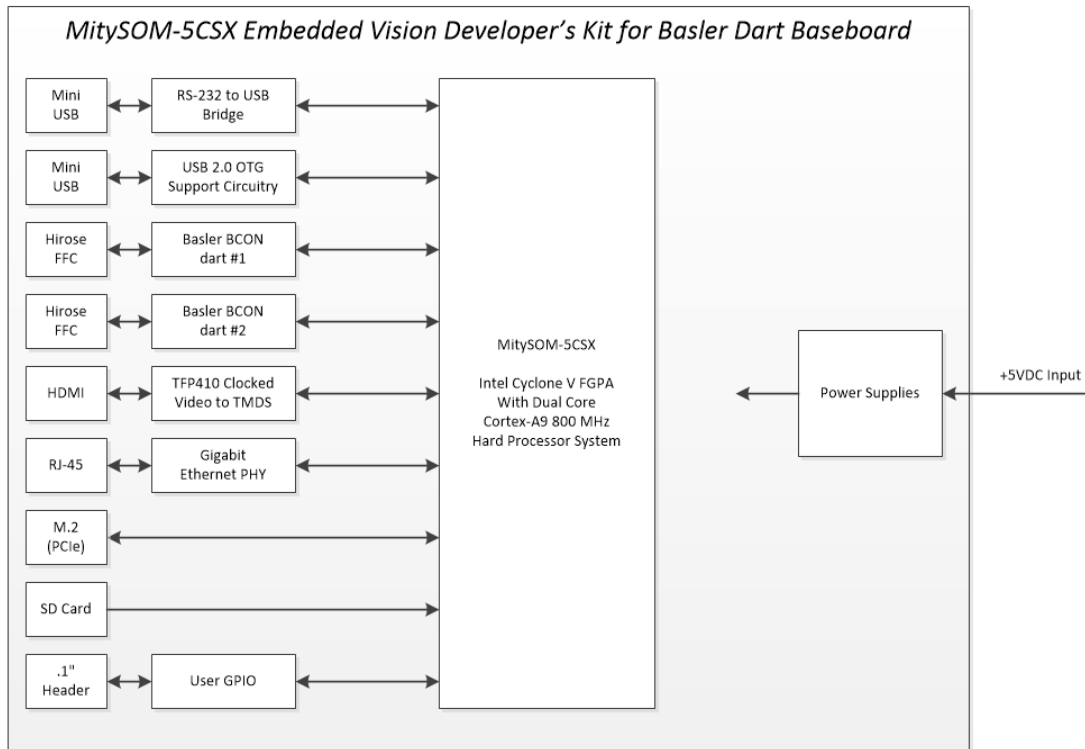

Figure 1: MitySOM-5CSX Embedded VDK for Basler dart Block Diagram

Additional details about the Cyclone V SoC, available peripherals, their features and FPGA IO details are provided in the data sheet at the Intel website (<http://www.altera.com/devices/processor/soc-fpga/cyclone-v-soc/cyclone-v-soc.html>).

Debug UART to USB Interface Description

The on-board UART to USB Bridge, FTDI FT230X, provides a serial interface at data rates up to 115,200 baud using a mini USB type B connector. The USB serial interface, J1, is routed to the MitySOM serial boot loading port, UART0. It allows for general module debug, remote code download and flash upgrades on an attached MitySOM from this connector when interfaced with a PC.

When connected to a Windows XP, Vista, 7 or 8 PC no drivers are required as Windows Update is used to obtain the drivers.

USB 2.0 Interface Description

The on-board USB OTG interface utilizes a mini B type connector J401 and interfaces with the USB PHY on the MitySOM-5CSX module. This PHY is connected to the USB0 controller within the Cyclone V SoC HPS. Linux drivers are available. This interface allows for a connection to either a PC or a USB device using an USB OTG to USB A type adapter, not included.

MultiMedia Card (SD) Interface Description

The on-board MultiMedia Card (MMC) slot uses a Secure Digital connector J403 which supports standard (3.3V) cards. U-Boot configuration information and Linux drivers are available.

Gigabit Ethernet Interface Description

The on-board Ethernet interface features a Micrel KSZ9031 Ethernet PHY capable of running at 10/100/1000Mbit, including link auto-negotiation and RGMII/MDIO capability. An industry standard RJ-45 connector is provided for external connection. This Ethernet interface may be used to perform remote code download via U-Boot and flash upgrades on an attached MitySOM-5CSX module in addition to standard network interfacing.

M.2 PCIe Interface Description

The on-board M.2 standard connector allows for connection to the MitySOM-5CSX module gigabit transceivers configured in PCIe x4 (Gen 1) mode. This allows interfacing to M.2 NVME SSD cards for data recording and playback.

Dual Basler dart Interface Description

Two Basler BCON dart camera flat flex cable (FFC) interfaces, J101 and J102, are provided to allow capturing video data from 1 or 2 Basler BCON dart camera systems.

GPIO Connector Description

Connector P1 includes 6 pins connected, via a 1 K series resistor, to spare FPGA pins on Bank 4A of the MitySOM-5CSX. These pins can be programmed as inputs or outputs for end application use. The connector also includes +5V, +2.5V and ground reference pins for powering of external circuitry.

Dual +5V Fan Interface Description

Two connectors, J2 and J3, are included that provide +5V power. The intent for these connectors is to power simple +5V fans (not included) in the situation that the system must be cooled.

Reset Switch Description

S41 is for the Cold Reset which causes the MitySOM input power supply to be toggled.

Boot Configuration Description

The baseboard is designed to configure the MitySOM-5CSX module to boot from the MMC/SD card.

ELECTRICAL CHARACTERISTICS

Symbol	Parameter	Conditions	Typical	Limit	Units (Limits)
Maximum Power Supply Output					
I _{Max}	5.0V Supply (AC Adapter) all components			3.0	A
I _{Max}	5.0V Supply ¹ for external components			TBD	A
I _{Max}	3.3V Supply ¹ for external components			TBD	A
Power Dissipation					
V _s	Supply Voltage		5±5%		V
I _s	Supply Current ²		1000		mA

Notes:

1. The maximum current supplied to external components should be limited to the specified maximum for all externally connected power supplies
2. M.2 NVME cards not attached, 100% ARM utilization, RS-232 and Ethernet are enabled and active. 1 Basler BCON dart connected, HDMI monitor attached and displaying live data.

ELECTRICAL INTERFACE DESCRIPTIONS

Input Power – J601

The MitySOM-5CSX Embedded VDK power interface, J601, requires a single +5 Volt power supply. A recommended input supply rating of at least 3A is recommended and a 3A supply with universal AC plugs is included with each kit. The pinout for J601 is listed in Table 1.

Table 1: J601 Input Power Interface Pin Description

Signal	J601 Position
+5 V	1
GND	2

Main Power Switch – S2

An input power switch is present on the kit, S2, which controls the power input, on or off, from J601.

MultiMedia Card (SD) Interface – J403

The MitySOM-5CSX Embedded VDK provides an MMC interface that uses a standard Secure Digital (SD) card slot for the physical interface. SD card adapters can be used to

allow using MicroSD and MiniSD cards in this slot. The slot is supplied with 3.3V for use with standard SD cards.

Debug/Boot UART – USB Interface – J1

The Debug UART – USB interface, J1, uses a standard USB Mini-B pinout as shown in Table 2.

Table 2: J400 Mini USB Connector Pin Assignments

Pin	Signal	Type	Standard	Notes
1	VBUS	Power	-	
2	D-	I/O	USB 2.0	USB data minus line
3	D+	I/O	USB 2.0	USB data plus line
4	GND	GND	-	
5	SHIELD	GND	-	

USB 2.0 Interface (OTG) – J401

The MitySOM-5CSX USB 2.0 On-The-Go port uses a standard USB Mini-B pinout as shown in Table 3.

Table 3: J401 Pin Assignments

Pin	Signal	Type	Standard	Notes
1	USB1_VBUS	POWER	-	
2	USB1_D_N	I/O	USB 2.0	USB data minus line
3	USB1_D_P	I/O	USB 2.0	USB data plus line
4	USB1_ID	I/O	-	
5	GND	POWER	-	

M.2 PCIe Interface – CN400

Table 4 describes the pin-out of the M.2 PCIe connector on the MitySOM-5CSX Embedded VDK development board. This connector provides a x4 lane Gen 1 PCIe interface to support the use of NVME style solid state disks (SSDs).

Table 4: J402 Pin Assignments

Pin	Signal	SoM Pin	Type	Standard	Notes
1	GND	-	POWER	-	
2	+3.3V	-	POWER	-

21	GND	-	-	POWER	-	
22	I2C1_SDA	30	30	IO	+3.3V	
23	CAM_ID	32	34	O	+3.3V	J101 1K Pull Down, J102 1K Pull Up
24	GND	-	-	POWER	-	
25	+5.0V	-	-	POWER	-	Note 1
26	+5.0V	-	-	POWER	-	Note 1
27	+5.0V	-	-	POWER	-	Note 1
28	GND	-	-	POWER	-	
29	GND	-	-	POWER	-	

Notes:

1. The maximum total current supplied to external components from the +5.0V supply should be limited to less than 2 A (TBD). The maximum current allowed per connector pin is 1A.

10/100/1000 Ethernet Interface – J500

The MitySOM-5CSX Embedded VDK provides an RJ-45 connection for a 10/100/1000 Mbps Ethernet connection. This connection follows standard TIA/EIA-568B pinout as shown in Table 6 below. The Ethernet PHY, Micrel KSZ9031, will auto negotiate the speed and duplex of the connected device.

Table 6: J500 Ethernet RJ45 Pin Assignments

Pin	Signal	Type	Notes
1	TXRXA_P	I/O	
2	TXRXA_N	I/O	
3	TXRXB_P	I/O	
4	TXRXB_N	I/O	
5	TXRXC_P	I/O	
6	TXRXC_N	I/O	
7	TXRXD_P	I/O	
8	TXRXD_N	I/O	

User GPIO Interface – P1

The MitySOM-5CSX Development Kit provides an 11 pin 0.1” header for use with custom design IO boards such as LED controllers or external trigger interfaces, etc. The connector provides 5.0V and 2.5V supplies for external circuitry and 6 ESD protected connections to the FPGA I/O. Note that there is a 1K series resistor in-line with the I/O signals.

Table 7: J500 User GPIO Pin Assignments

Pin	Signal	SOM Pin	Type	Standard	Notes
1	+5.0V	-	POWER	-	250 mA (TBD) max current
2	GND	-	POWER	-	
3	+2.5V	-	POWER	-	100 mA (TBD) max current
4	GND	-	POWER	-	
5	UGPIO0	52	I/O	+2.5V	Bank 4A. 1K series resistor to FPGA
6	UGPIO1	54	I/O	+2.5V	Bank 4A. 1K series resistor to FPGA
7	UGPIO2	56	I/O	+2.5V	Bank 4A. 1K series resistor to FPGA
8	UGPIO3	60	I/O	+2.5V	Bank 4A. 1K series resistor to FPGA
9	UGPIO4	62	I/O	+2.5V	Bank 4A. 1K series resistor to FPGA
10	UGPIO5	64	I/O	+2.5V	Bank 4A. 1K series resistor to FPGA
11	UGPIO6	66	I/O	+2.5V	Bank 4A. 1K series resistor to FPGA

Included Components

The following table lists the components that are included with the MitySOM-5CSX Embedded Vision Development Kit for Basler dart series cameras. See Table 9 for specific development kit ordering information.
