

Diffraction Waveguides

*Custom Diffraction Waveguides for Your
HUD and HMD Systems*

We specialize in building custom diffraction waveguides to your specification.

The Holographix Advantage:

||||► **Experience:** *Holographix has successfully completed numerous waveguide projects for many customers over the past 10 years.*

||||► **Development:** *Our structured development approach ensures manufacturable solutions.*

||||► **Ramp to Production:** *Our manufacturing processes are readily scalable to meet your volume production needs!*

A Full-Service Replication Company

Capabilities and Resources

Applications

Diffraction waveguides are used in numerous applications for a wide variety of industries. Devices that use diffraction waveguides include:

Display Products:

- Helmet- and Head-Mounted Displays (HMD)
- Heads-Up Displays (HUD)
- Augmented Reality (AR) Systems
- Virtual Reality (VR) Systems

Non-Display Products:

- Biosensors

Diffraction Waveguide Assembly

Holographix has the experience and capability to take your optical waveguide design from specification to production. Holographix is a leader in the development and manufacture of complex, high quality, custom optical waveguides. As a result, we have developed numerous creative solutions to meet or exceed our customers' expectations. Drawing on years of experience creating custom high-performance diffraction waveguide assemblies, let our quality driven team help turn your next design into a state-of-the-art product!

Quality Assurance

Over the past 25 years, Holographix has earned a reputation for providing our customers with outstanding development and manufacturing services for custom surface relief patterns. With a company-wide emphasis on quality, Holographix maintains a rigorous ISO 9001:2008 certified Quality Assurance program.

Waveguide Specifications

Waveguide Size:	up to 350 mm square
Grating Pitch:	down to 200 nm
Diffraction Grating Profile:	binary, blazed, slanted, sinusoidal
Grating-to-Grating Alignment:	< 30 arc sec
Grating-to-Substrate Alignment:	< 30 arc sec
Waveguide Wedge:	< 5 arc sec
Wavefront:	< $\lambda/8$ P-V
Optical Transmission:	> 99% from 420 nm to 2.2 μ m
Temperature Range:	-50° C to 260° C
Chemical Resistance:	most common solvents

Replication Benefits

Our proprietary replication process provides a cost-effective alternative to competing manufacturing processes. The inherent repeatability of the replication process also eliminates inconsistencies associated with other forms of production.

Replication Facilities

Production of replicated components and assemblies requires a significant investment in capital equipment. Our 15,000 square foot facility in Hudson, MA is equipped with:

- 5 Class 1000 cleanrooms
- 4 Custom UV replication labs
- March AP-1000 plasma treatment system
- Denton Infinity 22 thin-film box coater
- 2 Denton sputtering systems
- 4 ADE and Zygo phase shifting interferometers
- Cary 500 UV-Vis-NIR spectrophotometer
- 2 Mitutoyo Vision Systems
- Amray 3600 Scanning Electron Microscope (SEM)
- AFM Workshop TT – Atomic Force Microscope (AFM)
- ADT 7100 Dicing System
- CO2 Laser Scribing/Cutting System

Production Capabilities

Holographix specializes in the manufacture of custom replicated components and assemblies in production quantities. The inherent speed of our cold-forming replication process allows us to offer economical volume pricing without the associated high tooling costs. Whether your production requirements call for 100 individual components or 100,000 wafers, we can offer you a cost-effective solution.

Please contact us via phone, e-mail, or fax with any inquiries you may have regarding our services. We will be happy to assist you!
